

A comprehensive collection of papers, reports, and other useful information on the properties, applications, and conservation/restoration/care of plastics and polymer composites used in historic and contemporary architecture and artistic/historic works.

This valuable 2-volume publication offers an excellent permanent reference source for architects, engineers, conservators, building restoration specialist, campus planners, construction specifiers, government officials and others involved with the built environment or with art, cultural, or historic collections, as well as for libraries and for educational institutions and organizations with programs in architecture, building technology and preservation, and art and architectural conservation.

Among the topics examined in the Proceedings book are the following:

- historic perspectives – looking at plastics then and now • properties of plastics and carbon-polymer composites used in the construction of buildings, building components, windows, roofing, and other structures, and in the creation of works of art and architectural ornamentation • performance characteristics of these polymeric materials including fire behavior, energy considerations, durability, and weathering • material selection • research on testing, conserving, and cleaning plastic works of art and the challenges of reproducing historic plastic works • the role of 3D printing • numerous case studies involving polymeric materials used in the design and construction of museums and cultural complexes, entertainment and athletic facilities, commercial buildings, religious facilities, factories, educational institutions, parking garages, bridges, residential buildings, health care operations, and research structures. For the full listing of the publication's contents, see the attached PDF which contains the Table of Contents for Volumes I and II.

Included in the Conference Proceedings Plus package:

- The Proceedings book with papers and posters from the "Architectural Plastics... in the 21st Century" conference that had been scheduled for 2020 – A digital file containing the complete contents of 43 publications, historic and modern books and articles from 1902 to 2018 – News on developments in the preservation, care, and identification of plastics, additional case histories, and a wide range of other relevant supplemental material.
